

# UNIVERSAL CORROSION SPECIALIST

Distributed by EES

Universal Corrosion Specialist is formed in 2005, providing corrosion products and services for the Oil and Gas, Marine, Refinery and Petrochemical Industries. UCS's primary service includes: Corrosion Consultation, Product Application and Personnel Training.

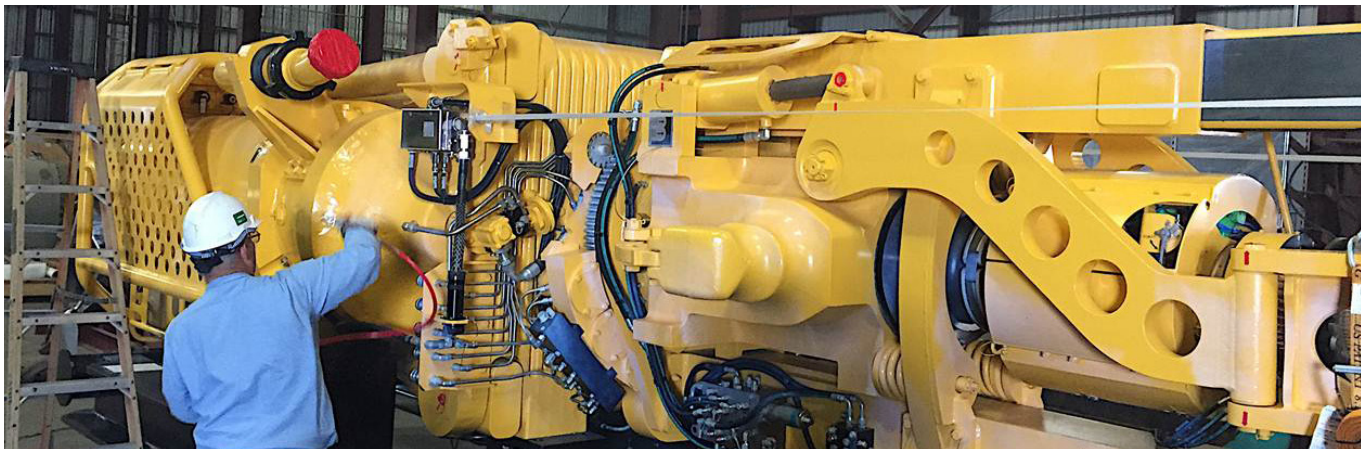

UCS maintains a team of certified personnel to clean and coat oilfield storage tanks and vessels, offshore rigs and platforms, warehouse capital spares and also numerous other projects to preserve valuable assets either before going into service or during full operation status.

UCS provides Clean-Protect-Preserve (CPP) services to clean/remove existing corrosion; then protect with our inhibitors; and lastly, pre-service with the inhibitor film wrap and enclosure bags for short or long term periods, depending on the needs.

UCS offers multiple delivery/application methods which can usually be incorporated into existing manufacturing or plant operating processes to include lay-up, construction, shipping and/or storage, and often times eliminating the need for additional steps.

One of the quality corrosion control products UCS is using in this region is Vapro-Vapour Corrosion Inhibitor (VCI). Vapro VCI protects all recessed areas and cavities and works on all metal surfaces in an enclosed atmosphere. In an enclosure, VCI emits molecules to a point of saturation within 12-24 hours. In the presence of moisture, these VCI molecules hydrolyze to form VCI ions. The Vapro VCI ions are attracted to metal surfaces. These ions passivate the metal and cause it to be inert to corrosion. The vapour covers all surfaces including crevices, cavities and all inaccessible areas sealing them to provide TOTAL PROTECTION.

NOV Top Drive System 1250 Protected with Vapro 886 VCI Acrylic Coating
